INTERNATIONAL JOINT SYMPOSIUM “MULTI-MITIGATION OF GEOTECHNICAL AND GEOENVIRONMENTAL ENGINEERING TO NATURAL DISASTER ON PROBLEMATIC SOILS”

December 4th – 6th, 2024
Surabaya, Indonesia

Hosted by:

Institut Teknologi Sepuluh Nopember – Indonesia

Supported by:

Kumamoto University – Japan

Japanese Geotechnical Society, JGS – Kyushu Branch

Indonesian Geotechnical Society, HATTI – East Java Branch

Indonesian Ministry of Public Works and Public Housing & Public

BACKGROUND

Various natural disasters have occurred nowadays, many infrastructure buildings have been affected, especially in areas that have problematic soil and geo-environmental problems. This joint symposium was initiated to be a forum for discussion and sharing regarding geotechnical and geo-environmental aspects as well as multi-mitigation efforts when natural disasters occur. This symposium is a research collaboration project between Kyushu branch of Japanese Geotechnical Society (JGS) and East Java Branch of Indonesian Geotechnical Society (HATTI). Also, this event is one of the academic activities to promote friendship based on the MOU between Kumamoto University (KU), Japan and Institut Teknologi Sepuluh Nopember (ITS), Indonesia. We anticipate that this event will facilitate strong collaborations and foster lasting friendships between the Japanese Geotechnical Society (JGS, Kyushu Branch) and the Indonesian Geotechnical Society (HATTI, East Java Branch)

CONFERENCE THEMES

- Soil characteristics and properties
- Underground space and deep excavations
- Tunneling
- Slope, debris flow and embankments
- Dams
- Shallow and deep foundations
- Soil dynamics and geotechnical earthquake engineering
- Soil improvement
- Geoenvironmental engineering
- Geotechnical reliability, risk assessment and management
- Geosynthetics and Geoproducts
- Engineering geology and rock engineering
- Forensic engineering
- Offshore and harbor geotechnics
- In- situ testing and monitoring
- GeoEnergy
- Case History
- Numerical analysis of soil-structure interaction
- Geotechnical Infrastructures
- Marine Geotechnics
- Design and Modeling
- Transportation Geotechnics, Engineering and Technology
- Piling foundations, technologies and testing
- Trenchless technology in underground constructions
- Others

FIELD TRIP

Porong Mud Volcano

The Sidoarjo mud flow (commonly known as Lumpur Lapindo, wherein lumpur is the Indonesian word for mud) is the result of an erupting mud volcano in the subdistrict of Porong, Sidoarjo in East Java, Indonesia that has been in eruption since May 2006. It is the biggest mud volcano in the world; responsibility for the disaster was assigned to the blowout of a natural gas well drilled by PT Lapindo Brantas, although company officials contend it was caused by a very distant earthquake that occurred in a different province.
