Master of Engineering in Renewable Energy Engineering Graduated with Cum Laude

The ITS learning environment was really conducive and I was able to interact with colleagues of the same concentration (Renewable Energy) and colleagues of the other concentration (Instrumentation) as well. The courses which I studied during my 2 years at the department were solid and the concept was grasped accordingly which has adequately equipped me to undertake a any PhD program in the future. During the duration of my study by the grace of the Almighty Allah, I was able to published 3 publications and the 4th one is under review by the Journal of Applied Engineering Science (JAES).

Most importantly, the entire International Office (IO) staff were so passionate about the welfare of international students during my tenure of studying at ITS. The other staff at IO and the volunteers as a whole were very kind, amicable, and supportive. I say a very big thank to you all. I pray that may the ITS continue to excell internationally.
