MODULE HANDBOOK

SPECIAL TOPIC ON THEORETICAL STATISTICS

Module name	SPECIAL TOPIC ON THEORETICAL STATISTICS	
Module level	Undergraduate	
Code	SS234640	
Course (if applicable)	SPECIAL TOPIC ON THEORETICAL STATISTICS	
Semester	7	
Person responsible for the module	Prof.Dr. Drs. Purhadi, M.Sc	
Lecturer	Prof.Dr. Drs. Purhadi, M.Sc	
Language	Bahasa Indonesia and English	
Relation to curriculum	Undergraduate degree program, elective, 7 th semester.	
Type of teaching, contact hours	Other SCL metode	
Workload	1. Lectures [L]: 3 x 50 = 150 minutes per week. 2. Exercises and Assignments [EA]: 3 x 60 = 180 minutes (3 hours) per week. 3. Independent Learning [IL]: 3 x 60 = 180 minutes (3 hours) per week.	
Credit points	3 credit points (SKS) Equivalent to 4.8 ECTS	
Requirements according to the examination regulations	A student must have attended at least 80% of the lectures to sit in the exams.	
Mandatory prerequisites	-	
Learning outcomes and their corresponding PLOs	CLO.1 Able to explain the concepts of Random Experiment, Random Variable Random, Probability Space, Distribution Function, Expectation Mathematical, Moment Generation Function, Function Characteristics, distribution of discrete random variable functions, function distribution of continuous random variable function CLO.2 Able to formulate Random Variable problems, Probability Space, Distribution Function, Expectation Mathematical, Moment Generation Function, Function Characteristics, distribution of discrete random variable functions, function distribution of continuous random variable function CLO.3 Able to explain the concept of sampling distribution, Statistical order distribution, Law of large numbers, Central limit theorem, Limit	PLO-4 PLO-5

	<p>distribution, estimation, methods of determining estimators, properties of estimators, loss and risk functions, adequacy statistics, family of loss and risk functions, adequacy statistics, Family exponential family, unbiasedness, equivariance, uniformly most powerfull test, unbiasedness for hypothesis testing, linear hypothesis</p> <p>CLO.4 Able to formulate Distribution problems sampling distribution, statistical order distribution, law of large numbers large, central limit theorem, limit distribution, estimation, methods of determining estimators, properties of estimators, loss and risk functions, adequacy statistics, Family of loss and risk functions, adequacy statistics, exponential family, unbiasedness, equivariance, uniformly most powerfull test, unbiasedness for hypothesis testing, linear hypothesis</p> <p>CLO.5 Able to solve sampling distribution, distribution order statistics, Law of large numbers, Limit theorem, central theorem, limit distribution, estimation, methods of determining estimators, properties of estimators, loss and risk functions, adequacy statistics, exponential family, unbiasedness, equivariance, uniformly most powerfull test, unbiasedness for hypothesis testing, linear hypothesis</p>	
Content	<p>Special Topics in Statistics Theory is one of the elective courses that is part of the field of study of statistical theory. The purpose of studying Special Topics in Statistics Theory is to master the concepts of Random Experiments, Random Variables, Probability Space, Distribution Functions, Mathematical Expectations, Moment Generation Functions, Characteristic Functions, distribution of random variable functions. Probability, Distribution Function, Mathematical Expectation, Moment Generation Function, Characteristic Function, distribution of random variable functions function distribution, continuous random variable function distribution, Sampling Distribution, Statistical Order Distribution, Law of Large Numbers, Theorem of Central Limit, Limit Distribution, Point estimation, interval estimation, methods of determining estimators, properties of estimators, loss functions and risk, adequacy statistics, randomness, efficient estimators, hypothesis testing. Hypothesis testing on normal distribution sampling and its application in statistical methods so that students have the learning experience of critical thinking and are able to make the right decisions about the use of these concepts, make the</p>	

	right decisions about the use of these concepts. The learning strategies used are discussion and exercises and assignments
Assessment and its weight	Assignment and Test 1 (25%) Midterm Exam (25%) Assignment and Test 2 (25%) Final Exam (25%)
Media employed	LCD, whiteboard, websites (myITS Classroom), zoom
Reading list	1. -

MATA KULIAH (MK)/ Course	KODE/ Code	Rumpun MK/ Course Group	BOBOT (sks)/ Weight (credit)		SEMESTER/ Semester	Tgl Penyusunan/ Drafting Date
TOPIK KHUSUS STATISTIKA TEORI / SPECIAL TOPIC ON THEORETICAL STATISTICS	SS234640	Statistika Teori dan Pemodelan	T=3	P=0	VII	Januari 2023
OTORISASI/ AUTHORIZATION	Pengembang RPS/ RPS Developer		Koordinator RMK/ Course Group Coordinator		Ketua PRODI/ Head of Department	
	Prof.Dr. Drs. Purnadi, M.Sc		Prof.Dr. Drs. Purnadi, M.Sc		Dr. Kartika Fithriasari, M.Si	
Capaian Pembelajaran (CP)/ Learning Achievement	CPL-PRODI yang dibebankan pada MK/ PLO					
	CPL-4	Mampu menerapkan Sains dan Matematika untuk mendukung pemahaman metode statistika				
	CPL-5	Mampu menerapkan teori statistika pada metode statistika				
	<i>PLO-4</i> <i>PLO-5</i>	<i>Able to apply Science and Mathematics to support understanding of statistical methods</i> <i>Able to apply statistical theory to statistical methods</i>				
	Capaian Pembelajaran Mata Kuliah (CPMK)/ CLO					
	CPMK 1. Mampu menjelaskan konsep Eksperimen Acak, Variabel Acak, Ruang Probabilitas, Fungsi Distribusi, Ekspektasi Matematis, Fungsi Momen Generation, Fungsi Karakteristik, distribusi fungsi variabel acak diskrit, distribusi fungsi variabel acak kontinu CPMK 2. Dapat memformulasikan permasalahan Variabel Acak, Ruang Probabilitas, Fungsi Distribusi, Ekspektasi Matematis, Fungsi Momen Generation, Fungsi Karakteristik, distribusi fungsi variabel acak diskrit, distribusi fungsi variabel acak kontinu CPMK 3. Dapat menjelaskan konsep Distribusi sampling, Distribusi order statistik, Hukum bilangan besar, Teorema limit pusat, Distribusi limit, penaksiran, metode penentuan penaksir, sifat-sifat penaksir, fungsi kerugian dan resiko, statistik kecukupan, Keluarga eksponensial, ketidakhbiasan, equivariance, uniformly most powerfull test, ketidakhbiasan untuk uji hipotesis, hipotesis linier					

	<p>CPMK 4. Dapat memformulasikan permasalahan Distribusi sampling, Distribusi order statistik , Hukum bilangan besar, Teorema limit pusat, Distribusi limit, penaksiran, metode penentuan penaksir, sifat-sifat penaksir, fungsi kerugian dan resiko, statistik kecukupan, Keluarga eksponensial, ketidakbiasan, equivariance, uniformly most powerfull test, ketidakbiasan untuk uji hipotesis, hipotesis linier</p> <p>CPMK 5. Dapat menyelesaikan Distribusi sampling, Distribusi order statistik , Hukum bilangan besar, Teorema limit pusat, Distribusi limit, penaksiran, metode penentuan penaksir, sifat-sifat penaksir, fungsi kerugian dan resiko, statistik kecukupan, Keluarga eksponensial, ketidakbiasan, equivariance, uniformly most powerfull test, ketidakbiasan untuk uji hipotesis, hipotesis linier</p> <p><i>CLO.1 Able to explain the concepts of Random Experiment, Random Variable Random, Probability Space, Distribution Function, Expectation Mathematical, Moment Generation Function, Function Characteristics, distribution of discrete random variable functions, function distribution of continuous random variable function</i></p> <p><i>CLO.2 Able to formulate Random Variable problems, Probability Space, Distribution Function, Expectation Mathematical, Moment Generation Function, Function Characteristics, distribution of discrete random variable functions, function distribution of continuous random variable function</i></p> <p><i>CLO.3 Able to explain the concept of sampling distribution, Statistical order distribution, Law of large numbers, Central limit theorem, Limit distribution, estimation, methods of determining estimators, properties of estimators, loss and risk functions, adequacy statistics, family of loss and risk functions, adequacy statistics, Family exponential family, unbiasedness, equivariance, uniformly most powerfull test, unbiasedness for hypothesis testing, linear hypothesis</i></p> <p><i>CLO.4 Able to formulate Distribution problems</i> <i>sampling distribution, statistical order distribution, law of large numbers large, central limit theorem, limit distribution, estimation, methods of determining estimators, properties of estimators, loss and risk functions, adequacy statistics, Family of loss and risk functions, adequacy statistics, exponential family, unbiasedness, equivariance, uniformly most powerfull test, unbiasedness for hypothesis testing, linear hypothesis</i></p> <p><i>CLO.5 Able to solve sampling distribution, distribution order statistics, Law of large numbers, Limit theorem, central theorem, limit distribution, estimation, methods of determining estimators, properties of estimators, loss and risk functions, adequacy statistics, exponential family, unbiasedness, equivariance, uniformly most powerfull test, unbiasedness for hypothesis testing, linear hypothesis</i></p>

<p>Deskripsi Singkat MK/ <i>Course Description</i></p>	<p>Topik Khusus Statistika Teori merupakan salah satu mata kuliah pilihan yang menjadi bagian dari bidang kajian teori statistika. Tujuan mempelajari Topik Khusus Statistika Teori adalah untuk menguasai konsep Eksperimen Acak, Variabel Acak, Ruang Probabilitas, Fungsi Distribusi, Ekspektasi Matematis, Fungsi Momen Generation, Fungsi Karakteristik, distribusi fungsi variabel acak diskrit, distribusi fungsi fungsi variabel acak kontinu, Distribusi Sampling, Distribusi Orde Statistik, Hukum Bilangan Besar, Teorema Limit Pusat, Limit Distribusi, Penaksiran titik, penaksiran interval, metode penentuan penaksir, sifat-sifat penaksir, fungsi kerugian dan resiko, statistik kecukupan, ketakbiasan, penaksir efisien, Pengujian hipotesis. Uji hipotesis pada sampling distribusi normal serta penerapannya dalam metode statistika sehingga</p>																		

	<p>siswa mempunyai pengalaman belajar berpikir kritis dan mampu memberikan keputusan yang tepat mengenai penggunaan konsep tersebut. Strategi pembelajaran yang digunakan adalah diskusi dan latihan serta tugas</p> <p><i>Special Topics in Statistics Theory is one of the elective courses that is part of the field of study of statistical theory. The purpose of studying Special Topics in Statistics Theory is to master the concepts of Random Experiments, Random Variables, Probability Space, Distribution Functions, Mathematical Expectations, Moment Generation Functions, Characteristic Functions, distribution of random variable functions. Probability, Distribution Function, Mathematical Expectation, Moment Generation Function, Characteristic Function, distribution of random variable functions function distribution, continuous random variable function distribution, Sampling Distribution, Statistical Order Distribution, Law of Large Numbers, Theorem of Central Limit, Limit Distribution, Point estimation, interval estimation, methods of determining estimators, properties of estimators, loss functions and risk, adequacy statistics, randomness, efficient estimators, hypothesis testing. Hypothesis testing on normal distribution sampling and its application in statistical methods so that students have the learning experience of critical thinking and are able to make the right decisions about the use of these concepts, make the right decisions about the use of these concepts. The learning strategies used are discussion and exercises and assignments</i></p>
