

Projecting the spirit of ‘Sustainable and Environmental Friendly Campus’, one of ITS’s initiatives is by practicing water reuse in the university. ITS highly encourage water saving by avoiding unnecessary water use and encouraging efforts to reuse waste water for watering activities.

This initiative has been implemented at the ITS Manarul Ismi Mosque, where waste water is utilized for watering plants around the area. Water reservoirs with the capacity of 5,000 liters are planted underground to accommodate the waste water. Moreover, the mosque also utilizes the rainwater harvesting system to gather the rainwater to supply water needs.
